In case you can't tell, I'm trying to get through my backlog of "important things to follow up on." Perhaps you and I could develop a script that we would use to respond to these folks? I'd feel more comfortable replying to these vendors knowing that we had an agreed upon message. From my perspective,

our expectation is that we need to complete our evaluation of the data and determine what, if any, followup work is needed (most likely through an NPL listing and remedial process). Though we could keep their information available, we are required to advertise/compete any contracting needs through Commerce Business Daily and do not individually notify companies of upcoming work. Therefore, the onus is on the company to review notices posted in the Commerce Business Daily and respond to the request if they feel their company qualifies for the work. At this time, we do not have a need for outside contracting to address the current response.

Let me know if this is the approach you feel is appropriate or revise as needed and I will contact vendors as well. Thank you, lw

Laura,

See below question about a vendor inquiry coming from OCIR.

Is there someone at Incident Command who can address vendor inquiries? In addition to this specific one, OAM has been compiling list of vendors who contact us through the GKM website. Our EOC OAM contact is Keith Stewart and he's been working through

our EOC H&S Desk (staffed by OARM).

Our contact was Jose Negrón, but understand that is no longer the case and we need a new contact or direction on IC's position for handling vendors.

Thanks,

Eugene

Hey Guys,

I talked with Mr. Janicki not long after this email, and feel obligated to forward him on to someone who can talk to him in technical terms about his technology (he was referred by the Governor's office). I just saw that R8 did an RFP for treatment over the winter, but I believe that is closed, so I guess the conversation would be about other more general or longer term options. Thank you for your assistance.

Best Regards,

Jack Bowles

Mark,

I was referred to you by the State of Washington Governor's office. My company has designed and built a machine that is used to clean highly contaminated water. I know it would work very well on cleaning up these old gold mines in the west. They were intended for sewage sludge but could be used for any kind of contaminated water. The Bill and Melinda Gates Foundation funded the development of these machines. I have included two videos that Bill Gates made with me on the machine.
